

# Join **#MyvoteEOS** Movement.

Own Your Vote, because Your 💖 Is Sovereign.

**#MyvoteEOS**

**#MyvoteEOS** is a blockchain governance campaign on EOS that aims re-establish legitimacy and accountability in governance by uncompromised consensus of all EOS holders on and off chain.

# Broader Context

Blockchain in the end is just a voting tool that gives **legitimacy** in public consensus and collective decision making.

### Consensus algorithms

Consensus algorithms like PoW, PoS or DPoS are just different ways of deriving procedural **legitimacy** in terms of deciding who is going to represent and notarize **public consensus** on behalf of the collective.

# Blockchain is a double-edged sword.

It can either save the world by giving people freedom,  
or it can enslave people by extreme polarization.

**POW** the consensus is captured by the # of ASICs.

**POS** the consensus is captured by the size of the stakes.

**There is no single chain that is free from small number of  
anonymous whales dominating the consensus.**

The governance of any blockchain at the current stage is largely captured by the size of stake weight via pre-mining and presales.

Has anyone seen web3? I can't find it.

25.3K 14.5K 172K

jack ⚡ @jack · Dec 21  
You don't own "web3."

The VCs and their LPs do. It will never escape their incentives. It's ultimately a centralized entity with a different label.

Know what you're getting into...

# **Place of EOS in the History of Blockchain**

# The vision for EOS is to become a truly governed blockchain. Thus came with DPoS and ‘no vote buy rule’.

**Chestahedron**  
Embodying human heart

**“The Intent of the code is law,  
Not code is law”**

Since blockchain is to represent the collective, it focused on collective governance that reflects the intention of the members

**EOS Constitution**  
Article IV

## **No Buying or Selling of Votes**

EOS differentiated itself from previous iterations of blockchain by explicitly prohibiting buying or selling of public consensus in its constitution.

**Without No vote buy clause, DPoS isn't much different than POW or POS chains in which the consensus is captured by the pareto distribution.**

**DPoS**

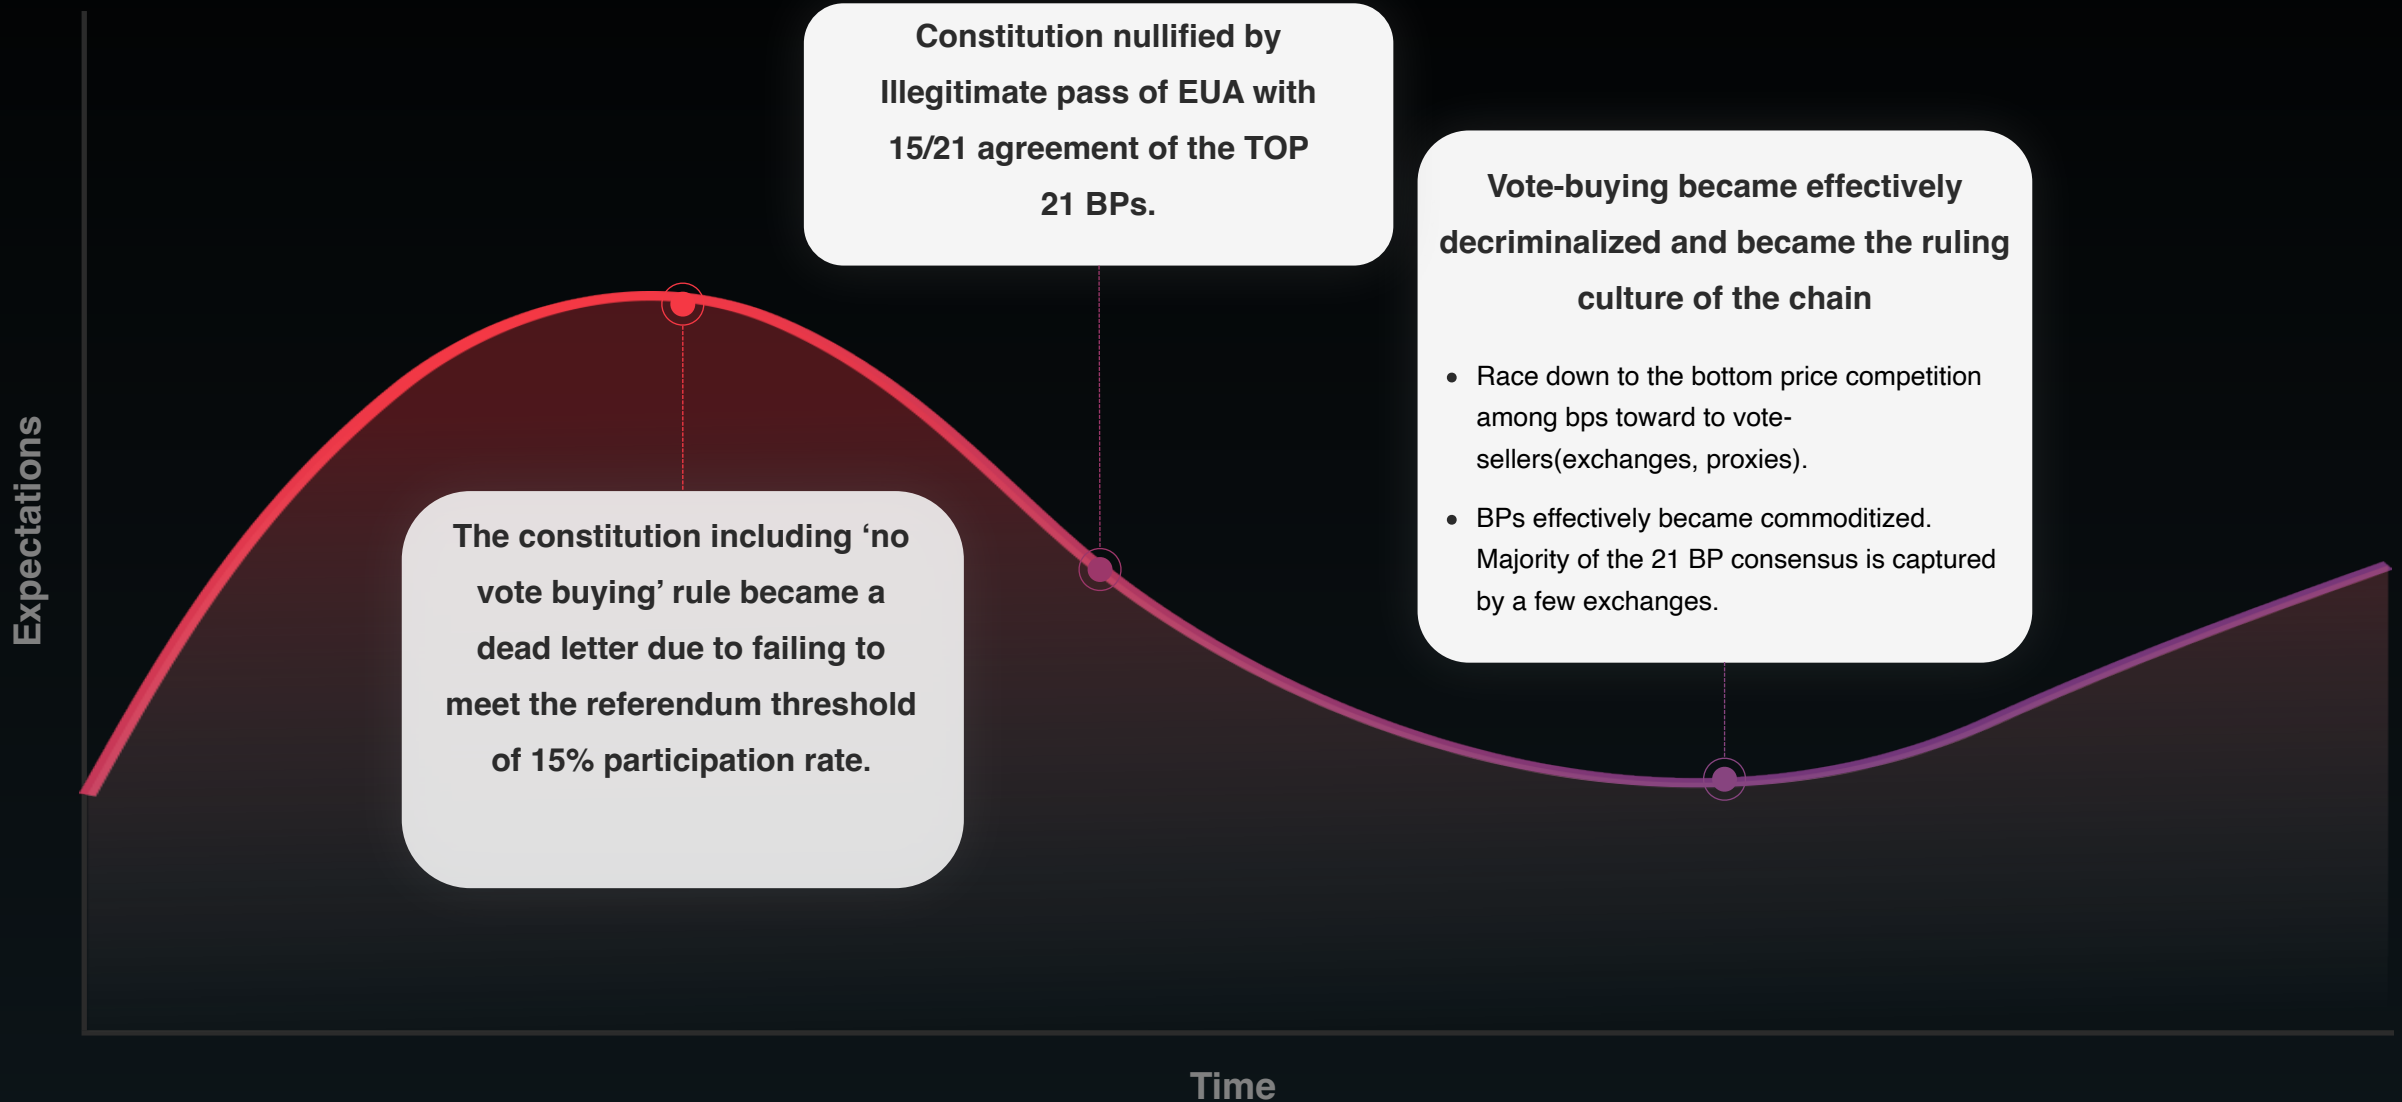

● 1 ● 2 ● 3 ● 4 ● 5 ● 6  
● 7 ● 8 ● 9 ● 10 ● 11 ● 12  
● 13 ● 14 ● 15 ● 16 ● 17 ● 18  
● 19 ● 20 ● 21

Adopted DPoS for speed and efficiency

1T30V, stake-weighted voting mechanism to elect 21 representing BPs who will collectively reach consensus on 15/21 agreement.

# However...

BPs are meant to represent community.

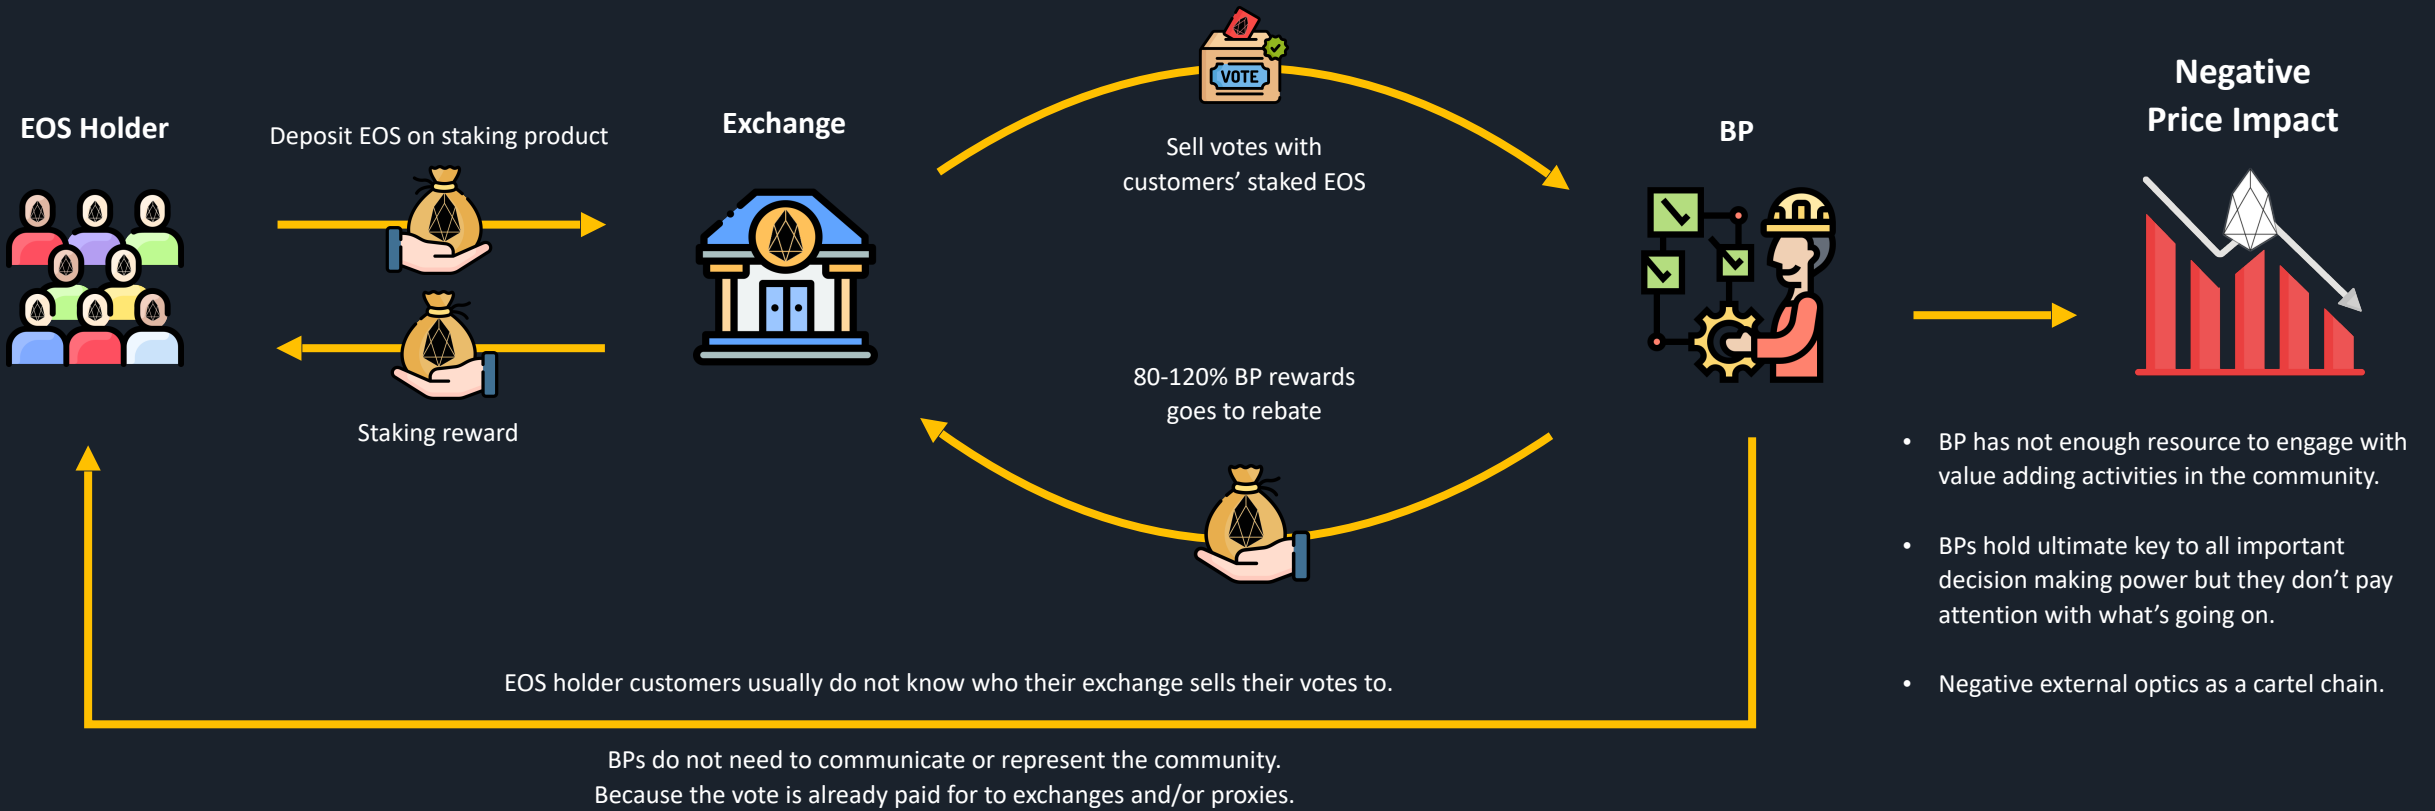

That's how they hold all the decision making power.

**But they don't need to communicate  
with them or represent them.**

It's because that their vote is already paid for to exchanges and proxies.

## Vicious Spiral

# How DPoS without no-vote-buy rule works

# There is new momentum building.

**EOS Network Foundation**

- EOS is the only chain that launched its foundation from the grassroots
- ENF is currently deploying more than 3m EOS
- Multiple initiatives including Wallet+, API+, Yield+, EOSIO+

**fractally**

- Fractal Democracy on EdenOnEOS
- DAO of DAOs
- #Twosday

**Bullish**

- Fully compliant exchange that is led by former NYSE CEO Tom Farley, Peter Thiel, etc.
- \$10B+ liquidity depth for institutions
- hybrid orderbook integrating AMM / Hashing on EOS Mainnet

**HELIOS**

- 45M EOS
- Currently preparing to launch EOS ETP
- VC and Incubators in different locations around the globe

**To turn all this momentum into fruition  
in a way that the community truly wants,  
the network needs more than 15 BPs in the top 21  
representing them properly.**

Reestablish **legitimacy** and  
**accountability** of EOS governance  
with **uncompromised consensus**  
of all EOS holders on and off chain.

#MyvoteEOS Proxy

Because Your 💖 Is Sovereign.

# #MyvoteEOS Proxy will only vote those BPs who sign the pledge below to join the #MyvoteEOS Alliance:

## BP Pledge

We will not engage in vote compromise in any form.  
(Operating our own proxy with rebate, buying votes from 3rd party exchanges or proxies.)

We will commit to being held accountable by engaging in check-up calls and providing public financial and operation reports on a regular basis.

We will commit to not operating more than one BP with the same ownership.

We acknowledge that we can be unvoted immediately if we engage in compromised voting hereafter.

# From a pareto captured blockchain to a truly democratic blockchain.

## Web 3.0

For the internet that is  
Truly owned by the community

Consensus  
captured by capital

**Pareto controlled**

Code is law  
Zero-sum game

Consensus reflecting  
community's actual will

**Truly democratized**

Intention of code is law  
Positive-sum game

## Virtuous Spiral

# How no-vote-buy rule can heal the dynamics of DPoS

→ delegate voting power  
→ Communicate will of holders

BP financial/operation report ←

EOS Holder

Deposit EOS on staking product

Exchange

Delegate vote

MyVoteEOS Proxy

vote  
without rebate

MyvoteEOS elected BP

Positive  
Price Impact

Voter reward directly from inflation  
can be deployed upon 15/21 approval

Represent holders in 15/21 mainnet governance  
Reinvest in value creating activities

- Communicate with EOS holders who voted them to represent them in mainnet governance.
- Reinvest revenue in value creating activities including code commit, dApp/ tool development, event hosting, running educational program, etc.

# Appendix

# The Flow of Voting on Centralized Exchange

# Initial Token Allocations For Public Blockchains

- Public Sale**  
Includes all pre-launch sale or “lock drop” allocations that were open to public participation
- Community Allocations**  
Ecosystem funds or airdrops that will eventually go to the community
- Insiders**  
Includes all team, company, and VC purchased tokens
- Foundations & More**  
Tokens allocated to foundations, community-governed grant pools, or other incentives like testnet participation rewards
